## Disclaimer

This document (the “Information Memorandum Proposal for H<sub>2</sub> infrastructure: Liège”) sets forth certain information regarding the transportation of H<sub>2</sub> which is considered as a solution to achieve the targets of decarbonisation. The information contained in this document reflects the point of view of Fluxys at this stage and is publicly disclosed for information purposes only and without any commitment whatsoever from Fluxys, and should not be considered to give rise to any contractual relationship between Fluxys and any interested party.

# 1. Project in the area of Liège

Following the Request For Information and the Matchmaking phase, the market expressed a need for open access H<sub>2</sub> infrastructure in the area of Liège. Fluxys has therefore worked out a specific H<sub>2</sub> network proposal within the requested coverage area, taking market demand into account as well as existing infrastructure and potential future demand.

**The first proposal published in January 2022 has triggered additional market interest within the broader region around Liège and incentivised Fluxys to review the existing proposal with additional infrastructure.**

The proposal, as depicted below, encompasses infrastructure able to transport H<sub>2</sub> within the coloured area, where the routing of the pipeline within the proposed Liège area cluster is connecting the different area's North-East of Liège around the Chertal area with the South-West area which is following the river Meuse and covers the region between Jemeppe-sur-Meuse in the East, along Seraing, Flémalle, Ivoz-Ramet, Engis, Amay and up to beyond Tihange in the West.

The described pipeline routing must be seen as indicative, but gives a clear overview of the most probable H<sub>2</sub> network development in the area of Liège, and therefore the highest likelihood to have an easy access to the network from within the proposed coverage area (coloured).

Specific market's demand, also outside the proposed coverage area, can alter or extend the routing.

The necessary dimensioning of the network and the according capacity, as well as the timing and phases will be further defined during the Open Season. The above described pipeline routing must be seen as indicative and may alter throughout the Open Season based upon participants feedback.
