1. 2. The tariff for a capacity reservation of less than 1 day is equal to the tariff for one year divided by the number of hours in the year (8760 or 8784 for leap years) and multiplied by the number of subcribed hours;

3. For reservations of entry service, OCUC service, exit service at interconnections points, installation points or end-user domestic points (Domestic Exit HP service and PS) and for direct line capacity for durations of less than 1 year, the proportional tariff (as calculated at point")" or at point"2" here above) is multiplied by a multiplier of 1,45 (NYM) and multiplied by a seasonal coefficient which varies as

(1) The CREG has approved on 30/03/2023 tariffs for year 2024 as well as the tariff adjustment formula which will be applied for 2025, 2026 and 2027. The adjustment is made of the yearly indexation which will be applied every year on the 1st of January through following formula: "tariffs of year 20xx" = "tariffs of year 2024 " multiplied by "consumer price index of the month of April of year (20xx-1)" divided by "consumer price index of the month of April of year 2023 ", except for tariffs noted * for which the adjustment will take into account in addition the decreasing profile of capacities and the effective sold capacities from the end of the L/H conversion in Belgium.
